**Valley Air Solutions Announces 1<sup>st</sup> Anaerobic Treatment Lagoon  
Guaranteed to be Upgradeable to an Anaerobic Digester**

**BAKERSFIELD – September 29, 2004** – Valley Air Solutions LLC announced today that new dairies planning to build and operate in the San Joaquin Valley can for the first time build an anaerobic treatment lagoon that simultaneously meets USDA NRCS Conservation Practice Standards No. 359 and the San Joaquin Valley Air Pollution Control District’s interim dairy requirements and be guaranteed that their lagoon would be upgradeable to an anaerobic digester with biogas recovery and renewable electricity generator.

Valley Air Solutions in working with fabrication partners including Williams Engineering Associates and others felt that a guaranteed upgrade would be welcomed and reduce future uncertainty for these new San Joaquin Valley dairy businesses. “The Air District is pleased to see the market responding with the development of technologies that may help new large dairies meet air pollution control requirements.” said Dave Warner, Director of Permit Services for the San Joaquin Valley Air Pollution Control District.

**About Valley Air Solutions LLC.** – Lodi, California-based Valley Air Solutions LLC, is a provider of cost-effective reliable turnkey anaerobic digesters, biogas and methane recovery, biogas monitoring for engine protection and renewable electricity generation solutions including onsite service and support that helps dairies and agriculture meet and exceed their air quality obligations without losing their focus. Valley Air Solutions is among the first in the San Joaquin Valley to offer no capital outlay solutions that places modern reliable anaerobic digestion technology on farms.
